

One stop solution provider for R & D, design and manufacturing of medical devices by covering the upstream industry

International Component Manufacturing & Design Show (ICMD), is specially designed for the business of medical device manufacturers and upstream product suppliers, which include Materials, Design, R&D, Components, parts, modules, Software, data processing, Manufacturing equipment, OEM technology, Packaging, printing, Cleaning, disinfecting and other relative services.

Exhibits and the leading industry players

- Materials
- Design, research and development
- Components, parts and modules
- Software and data processing
- Manufacturing equipment and OEM technology
- Packaging and printing
- Cleaning and disinfecting
- Relative services

Visitor Profile

- Government officials
- Directors of rehabilitation hospitals, specialists, therapists
- Manufacturers, dealers, agents, retailers
- Staff at rehabilitation and welfare institutions
- Social organizations and volunteer groups
- Staff at rehabilitation education institutions and research institutions
- Disabled people and the seniors
- Visitors with home-use nursing products needs

Simultaneous event

- CMEF-Asia Pacific's leading event serving the entire value chain for the medical devices market
- Meet with more than **2,800** medical device manufacturers who exhibit with us at the CMEF
- Communicate with more than **24,000** decision makers engaged in medical device manufacturing, R&D, technology and sales.
- Get to know the most up-to-date trends of the medical device industry.
- Source for new products and new technology.

Market Potential:

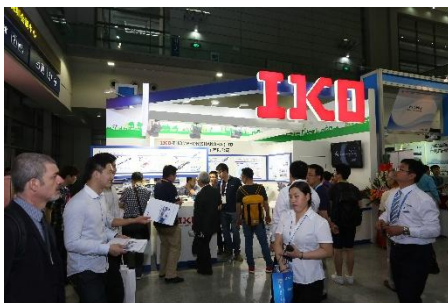

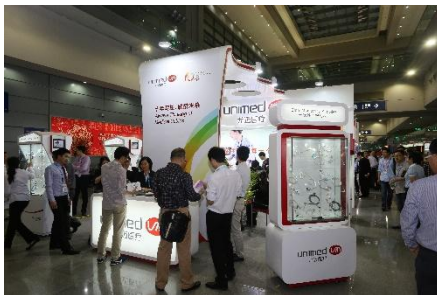

- **15,348** medical device manufacturing enterprises in China
- **3.2 billion** USD on New product R & D expenditures

One stop solution provider for R & D, design and manufacturing of medical devices by covering the upstream industry

Along with ICMD, "Customized Medical Equipment Manufacturing Technological Innovation Forum" focuses on the new technology of medical device design and manufacturing industry, intends to provide not only a convenient channel of communication between the enterprises and OEM suppliers, but also stimulate the innovation and the development of medical equipment manufacturing industry.

The previous forum covered the relevant content of medical device manufacturing industry, including optical system, sensor system, drive system and other innovative technology. There were more than 300 professional participants including the famous experts of the industry presenting the hot topic on "how to control the quality of OEM products and services based on medical device registration standards". Besides that, there were also a series of speeches by world-famous OEM suppliers, which showed the cutting-edge manufacturing technology to medical equipment suppliers.
